SUMMARY

Computer science student passionate about technology and software development studying at Cal Poly Pomona. Experience working on over 15 technical projects with teams varying from one person in size to over ten people.

SKILLS

Languages: C#, Java, Python, MIPS assembly, C

Technologies: Windows, Jira, MySQL, Unity, Github, Bash/Unix, Photoshop

EDUCATION

Computer Science, B.S (3.9 GPA) | California State Polytechnic University, Pomona Expected May 2026
Relevant Coursework: Data Structures and Algorithms, UI/UX Design, Game AI, Machine Learning

EXPERIENCE

IT Help Desk Volunteer | City of Corona

Jan 2025 – Present

- Responded to client support tickets, providing troubleshooting and resolution for hardware, software, and network issues.
- Reimaged and configured Windows workstations for deployment using internal tools and standardized procedures.

Help Desk / Windows

IT Support | Private/Client Based

Jul 2022 – Present

- Coordinated and conducted on-site and remote support sessions with **10+** private clients to set up and maintain computers, printers, email accounts, and Windows software.
- Deployed and configured multiple systems for a growing local business, contributing to their operational efficiency and scaling to over **\$1M** in annual revenue.

Windows

Code Coach | The Coder School

Jul 2024 – Present

- Tutored students aged 8–17 in programming fundamentals using Java, Python, and Unity, tailoring lessons to individual learning styles and experience levels.
- Collaborated with a team of coaches to develop engaging curricula and effective teaching strategies to maintain student interest and progress.

Java / Python / C#

LEADERSHIP

PIE Dev Game Studio | Programming/Engineering Team Lead

Aug 2023 - Present

- Lead Engineer in a team of over **20** members including other engineers, artists, sound designers and writers.
- Led the design and development of scalable system and project architectures by: iterating through prototypes, incorporating feedback from playtests to drive improvements, and refactoring critical code and systems to enhance performance and maintainability.

PROJECTS

[Solar Sweets](#) | C# Unity 3D Game Project

Jan 2024 - Aug 2024

- Led a team of **5+** programmers hosting SCRUM meetings several times a week to create a 3D online multiplayer game and deploy it onto Steam Marketplace.
- Integrated key UI features including a leaderboard screen showcasing player performance and a multi-page recipe book, enhancing the overall user experience.
- Developed a robust, C# inheritance-based finite state machine to implement complex player behaviour and animation logic for a 3D player controller.
- Managed data, game states, and real-time client interactions with Unity C# Relay package and RPC calls.
- Created a designer-friendly tool that allows designers to easily test different values for user attributes and minigame attributes.

[GMTK Game Jam 2024](#) | C# Unity 2D

Aug 2024

- Produced a game that placed in the **97th** percentile of submissions in a game jam that had over **7500** project submissions and over **32,000** participants.
- Designed and implemented a unique window scaling puzzle mechanic in which objects change scale based on the shape and scale of the game window.
