SUMMARY

Computer science student passionate about software and game development studying at Cal Poly Pomona. Experience working on over 10 technical projects with teams varying from one person in size to over ten people.

SKILLS

Languages: C#, Java, C, Python, MIPS assembly

Technologies: Unity, Github, Bash/Unix, Processing, Davinci Resolve, Photoshop, Blender, Solidworks

EDUCATION

Computer Science, BA (3.9 GPA) | California State Polytechnic University, Pomona **Expected May 2026**
Relevant Coursework: Data Structures and Algorithms, UI/UX Design, Game AI

LEADERSHIP

PIE Dev Game Studio | Programming/Engineering Team Lead **Aug 2023 - Present**
Lead Engineer in a team of over 20 members including other engineers, artists, sound designers and writers. Led the design and development of scalable system and project architectures by: iterating through prototypes, incorporating feedback from playtests to drive improvements, and refactoring critical code and systems to enhance performance and maintainability.

PROJECTS

Solar Sweets | C# Unity 3D **Jan 2024 - May 2024**

- Led a team of 5+ programmers hosting SCRUM meetings several times a week to create a 3D online multiplayer game.
- Integrated key UI features including a leaderboard screen showcasing player performance and a multi-page recipe book, enhancing the overall user experience.
- Developed a robust, inheritance-based finite state machine to implement complex player behaviour and animation logic for a 3D player controller.
- Managed data, game states, and real-time client interactions with Unity Relay package and RPC calls.
- Created a designer-friendly tool that allows designers to easily test different values for player attributes and minigame attributes.

GMTK Game Jam 2024 | C# Unity 2D **Aug 2024**

- Produced a game that placed in the 97th percentile of submissions in a game jam that had over 7500 project submissions and over 32,000 participants.
- Designed and implemented a unique window scaling puzzle mechanic where objects change scale based off of the shape and scale of the game window.

Jack Black Attack | C# Unity 2D **Oct 2023 - Dec 2023**

- Developed a Blackjack card game in Unity utilizing Unity's built in UI system and Scriptable Objects, enabling players to engage in hands of Blackjack while tracking winnings based on a fixed bet system.
- Integrated Blackjack UI gameplay with a 2D top-down fighter mechanics system, collaborating with other Unity engineers to seamlessly combine and enhance both systems into a cohesive player experience.
- Utilized DOTween, a Unity Tweening library to animate drawing cards, viewing blackjack hands, and in-game animations.

EXPERIENCE

Code Coach | The Coder School **Jul 2024 - Present**

- Responsible for tutoring students between the ages of 8 and 17 on programming concepts using Scratch, Python, and Unity
 - Worked with a team of coaches to come up with teaching strategies and a curriculum to keep students engaged.
- Unity / Python / Scratch

IT Help Desk Volunteer | City of Corona **Jan 2025 - Present**

- Provided technical support and troubleshooting for hardware, software, and network issues for city employees, ensuring minimal downtime and efficient operations.
 - Assisted in the installation, configuration, and maintenance of IT equipment, including computers, printers, and peripherals.
- Help Desk / Windows
